DIGITAL LITERACY PROJECT

STUDENT DETAILS

Student Name : Arnav Kumar

Registration Number : 25BAII0304

Branch : B.Tech. CSE (AI & ML)

Course Code : CSE0001 – Digital Literacy

INSTITUTION

VIT Bhopal University

Submission Date : 27th March 2026

Introduction

This project was assigned to us to help us realize the importance of digital literacy in our modern world. As a Student Digital Ambassador (according to the given scenario), my task was to learn and share digital literacy skills with others. I have successfully completed five different tasks for this project, which include online tools, communication, and cyber safety.

I thought digital literacy meant only being able to use digital devices or apps. However, I learned that digital literacy also includes being responsible, safe, and professional online. I learned new things from all five tasks I completed for this project. I learned how to create content, build a profile, and more.

I learned a lot from this project, and I think this project improved my communication and technical skills, which will be helpful for my academic and professional life.

Task 1: Infographic

For this task, I have created a digital literacy awareness infographic using Canva. I choose Canva because it is easy to use and has many designs and templates. In the infographic, I have explained what digital literacy is, useful digital tools for students, safe internet practices, and professional email etiquette.

During the process of designing the infographic, I have kept in mind that it should be simple and look attractive so that anyone can easily understand the content. While designing the infographic, the major challenge I faced was to choose the appropriate content without making the infographic look messy. At first, I found it difficult to balance the content and the look of the infographic. However, I have improved the infographic by using short and simple content.

From this task, I have learned how to present the content in a visual way, which is also important in communication.

Task 2: Digital Portfolio

In this task, I created and updated my own profiles on various platforms such as GitHub, LinkedIn and Kaggle. These platforms are significant for students as they help them develop their professional online profiles. GitHub is used to share projects and coding-related information, LinkedIn is used for networking purposes, and Kaggle is primarily used to compete in data science and machine learning.

While creating my profiles, I realized how important it is to develop my professional online profiles. I included my educational information as well as other details to make my profiles complete. I also kept them simple and clean as required.

I plan to use these platforms in my future as well by uploading my projects on GitHub to improve my coding skills. I will use LinkedIn to connect with various professionals in my field as well as stay updated with various trends. I will use Kaggle to master Data Science and Machine Learning.

This task was very beneficial as it allowed me to take my first step in developing my career profile from the beginning of my college life.

Task 3: Platforms

For this task, I explored both coding and collaboration platforms. I completed a beginner-level coding challenge. This helped me understand basic problem-solving skills. This was a great experience for me because I have improved my logical skills and gained confidence to do more in the future.

I also created a Google Form for a digital literacy quiz. It has five questions in total. I have included multiple-choice and short answer question types. This has helped me understand how to collect responses and organize them using Google Sheets.

These platforms are very useful for academic purposes. It can help us in improving our technical skills using coding platforms. Google Form can be useful for group work and communication.

This task has helped me understand how to use technology for collaboration and communication.

Task 4: Email Etiquette

In this task, I learned how to write professional emails and how to communicate properly by following the proper rules of communication.

In this task, I have composed two emails, one to a professor asking for an extension, and the other to the internship coordinator.

I have also made a list of the do's and don'ts of social media, which helped me understand how a student should behave responsibly.

The problem that can arise from poor communication is that a person might write a message that is unclear or rude, like a student who is writing to a teacher but fails to include a proper subject line or greeting, which might lead to a negative impression.

I have learned from this task that simple and polite communication is very important, especially in academic and professional life.

Task 5: Cybercrime

While doing the case study on cyber-crime, I found that people can become victims of online fraud very easily. This is because online fraud looks very real and is very difficult to identify.

While working on the case study on cyber-crime, I found that one of the major reasons for cyber-crime is that people are not aware of it. Students are often targeted because they are not very cautious while sharing information.

One habit that I am going to change is that I am going to be very cautious while clicking on any link and sharing information on the internet.

While doing this task, I realized that one has to be very cautious and alert while using the internet.

Conclusion

I found this project to be a wonderful learning experience for me. I learned various facets of digital literacy, such as communication, online presence, and cyber safety. I also learned to effectively utilize different tools and platforms.

Most importantly, I have also learned that being digitally literate is not only about using technology but also about using it safely and responsibly.

I find this skill to be highly beneficial for my future academic and professional needs. I must say that this project has made me more aware and confident as a digital user.
